

AH-64 ENGINE WASH CONTAINMENT SYSTEM

AH64-EWCS

DESCRIPTION

The Armick AH-64 Engine Wash Containment System provides a completely self-contained system that provides both water and air, and will collect all liquid runoff and trap the expelled gas path for disposal. This is accomplished with an easily installed tarp system that returns all runoff to a collection tank on the unit. It utilizes an air driven pump that is powered by an onboard diesel compressor, or can be run from the aircraft PAS air while the APU is running, if necessary.

FEATURES

- All operations are conducted at the flip of a lever
- Powered by on-board diesel compressor or aircraft PAS air while the APU is running
- Doubles as a portable flight line sheet metal cart
- Wash, rinse, and runoff collection in a single unit
- Prevents the loss of time and potential risk of moving an aircraft to the wash rack
